

## Brel 1Collaboration – Bringing People Closer Together

Companies today operate beyond their conventional physical office, across geographical boundaries and time zones. Business decision needs to be made instantly with full access to crucial information regardless of time and location.

More so than ever, companies are searching for innovative and efficient ways to engage various departments from finance, R&D, manufacturing to marketing in working closer together.

Surge in the use of the internet coupled with smart devices has created a new BYOD culture in organisations.

Brel 1Collaboration is helping organisation build a competitive advantage by improving the way people work regardless of location or organisational structure.

### Benefits of Brel 1Collaboration

#### Improved Business Processes

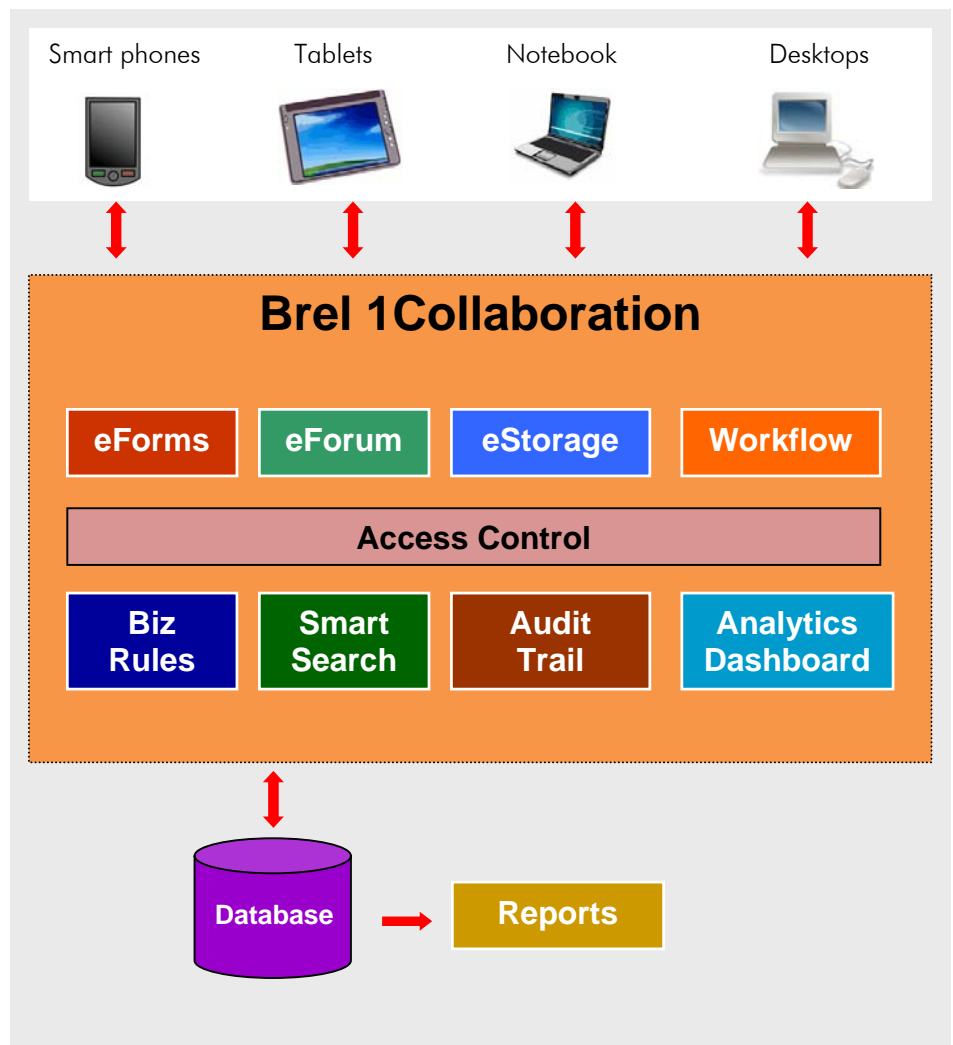

Brel 1Collaboration creates a borderless environment empowering team members from various departments and external partners work closer together. This improvement in communication result in more efficient business processes.

#### Improved Corporate Governance and Best Practices

By providing a simple yet Business Rule Engine the most complex business processes have become simplified steps to execute, saving time and money.

#### Unified Content Management

Brel 1Collaboration central storage management ensures all digital content are available Anytime Anywhere.

### Functionalities

#### eForm Publisher

The eForm Publisher enable electronic forms to be created quickly and easily. All data entry at the eForms are securely stored in the Database Engine for future retrieval and reports.

#### eStorage Management

A central eStorage Management System enables all digital content to be stored centrally and shared by all team members Anytime Anywhere on Any Device.

#### Encryption

An encryption service is available to encrypt any digital content uploaded to the eStorage Management System. This provides added security for highly confidential digital content.

#### eForum

eForum is a simple engine that encourages discussions between team members. This improves communications among team members.

### Intelligent Workflow

The workflow engine simplifies the building and execution of business processes. When integrated with the powerful Business Rule Engine, implementing Business Processes becomes a breeze.

### Business Rule Engine

The powerful yet simple-to-use Business Rule Engine makes implementing complex Business Processes a breeze. Working together with the Access Control System, it makes sure only authorised users have access to the right information.

### Access Control System

An Enterprise-level Access Control System (ACS) allows complete control over user access to information and user action capability. This ensures that only authorised users have controlled access to the system.

### Smart Search Engine

The in-built Smart Search Engine ensures that any stored digital content can be found in the shortest possible time based on your access rights. You can also search for information inside digitally stored document that are text based like pdf, doc, ppt, xls, txt and others.

### Dashboard

The Dashboard provides clear visibility to all processes within the organisation. This helps in improving resources allocation and increased productivity.

### Analytics

The Analytics Engine collects key details on system usage. The information analysed helps in understanding usage pattern. It has also been used to identify process weakness resulting in improved processes.

### Reports

System comes with standard reports and online query system to locate vital information within the entire system.

### Audit Trail

The Audit Trail Manager faithfully and accurately keeps track of all user actions. The powerful reporting tool allows system administrators to quickly generate vital information pertaining to user actions.

### BYOD

Brel 1 Collaboration can be deployed in desktops, notebooks and smart devices like iPhones, ipods, Android-based smart phones and tablets. We fully support the deployment of BYOD.

### Notifications

System provides notifications to users thus ensuring timely completion of each process.

### Integration to Microsoft Active Directory and LDAP

Brel 1 Collaboration has seamless integration with Microsoft Active Directory and LDAP directories.
